

Since 2011, we have been using artificial intelligence to tackle climate change. Our software already enables the full utilization of wind and solar energy in 20 countries around the world. Going forward, we will make machine learning methods accessible for even broader use in the energy industry and smart energy applications.

Join our team as

Linux Administrator

Are you an experienced Linux administrator looking for a new challenge? You enjoy really big data, distributed data centers, auto-scaling to hundreds of nodes? You would like to take responsibility for the future-proof expansion of our infrastructure? Then we are looking forward to your application!

We create distributed Java applications using leading-edge technologies such as Spring Boot, Docker, MongoDB and Cassandra. If you are excited about weather forecasting and satellite data and their use for the energy transition, this is the place for you.

Electricity from renewable energy is the energy source of the future - but unfortunately as unpredictable as the weather. Our software helps to ensure a reliable supply.

Your role

- You administrate our heterogeneous system landscape and application infrastructure
- You take responsibility for operations, backup and recovery
- You make decisions in the DevOps team about the right infrastructure for our data-intensive applications

Your profile

- You have many years of experience in the administration of Linux systems in a heterogeneous landscape (IPTables, routing, Ansible, security, certificate management, ...)
- Good English language skills

What you will find at enercast

- In the focus of your tasks you will encounter the following technologies, some of which you should have a good command of:
 - Docker
 - Kubernetes
 - Apache Cassandra
 - AWS Cloud
 - Bash scripting
 - Monitoring
- In addition, the following technologies and tools are also used:
 - Databases (MongoDB/PostgreSQL)
 - Log management / Elastic Stack
 - Gitlab
 - Python
 - Atlassian

Our offer

- An exciting job that helps build the renewable energy future
- A highly motivated DevOps team of researchers, developers and support engineers
- Flexible working at our attractive workspace in the Science Park Kassel and in the home office
- Freedom for your creative ideas
- Opportunities for personal development through work with current technologies, individual training and participation in international research projects
- Attractive compensation package, possibly including an equity component at a later stage
- Permanent employment contract

Your next step

We look forward to receiving your application with a detailed cover letter and salary expectations. For initial information, please contact Mr. Stefan Staedler at +49 561 4739664-0 or jobs@enercast.de.
